Un bosque de pilares —ampliado por una cuadrícula de árboles— soporta el nuevo volumen que es a la vez edificio y pérgola, creando en planta baja una plaza pública sombreada. Se incorporan métodos constructivos vernáculos como la volta catalana.

A forest of columns — augmented by a grid of trees — supports the new volume, which is at once building and pergola, creating a shaded plaza at ground level. Vernacular building methods like the Catalan vault are also included in the project.
